BUG REPORT

Manual Software Testing Assignment

Website Under Test: next.practiz.xyz

Prepared By	Ramakrishna Garala
Role Applied For	Manual Software Tester Intern
Organization	HighScores.ai
Date of Submission	10 March 2026
Total Bugs Found	10 (9 Functional + 1 Others)

SECTION 1 — Bug Summary Table

The table below provides a high-level overview of all 10 bugs discovered during exploratory and functional testing of next.practiz.xyz.

Bug ID	Title	Module	Type	Severity	Priority
BUG-001	Date of Birth field allows year 2024 – no minimum age check on Student signup	Registration	Functional	High	High
BUG-002	Parent email is accepted without any verification — no OTP or confirmation sent	Registration	Functional	High	High
BUG-003	Password field has no requirement for special characters — weak passwords accepted	Registration	Functional	Medium	Medium
BUG-004	HTML code is showing as plain text in the cart — description is not rendering properly	Shopping Cart	Functional	High	High
BUG-005	Premium paid package can be purchased for $0.00 — checkout completes without any payment	Checkout / Payment	Functional	Critical	High
BUG-006	"Continue Shopping" button on the order success page throws a 404 error	Post-Checkout / Navigation	Functional	Medium	Medium
BUG-007	Question text is almost invisible and the graph image is broken inside the assessment	Assessments / Test Taking	Functional	High	High
BUG-008	Calendar is really hard to use — dates are invisible in Month view and missing entirely in Week view	Calendar	UI / UX	Medium	Medium
BUG-009	Collaboration chat is showing 0 participants even though multiple students are clearly chatting	Collaboration / Chat	Functional	Medium	Medium
BUG-010	Multiple navigation links across the platform lead to a 404 — Code Editor, Resume, and Marketplace are all broken	Navigation / Sidebar / Profile Menu	Functional	High	High

SECTION 2 — Severity & Priority Reference

Severity	Definition	Example
Critical	App crash or core feature completely broken	Cannot register or login at all
High	Major feature broken	Valid user login fails
Medium	Feature works partially or returns wrong data	Profile saves incorrect data
Low	Minor issue	Misleading error message

SECTION 3 — Detailed Bug Reports

Bug Report — BUG-001

BUG-001 | Date of Birth field allows year 2024 – no minimum age check on Student signup	
Module	Student Registration
Bug Type	Functional
Severity	High
Priority	High
URL	https://next.practiz.xyz
Browser	Google Chrome
Device / OS	Desktop | Windows 11
Preconditions	The user is on the Student Sign Up flow and has reached the Date of Birth step.
Steps to Reproduce	1. Open https://next.practiz.xyz 2. Click on "Sign up as a Student" 3. When the Date of Birth screen appears, set Month to Jan and Year to 2024 4. Click Next
Expected Result	The app should catch this and show something like "You must be at least X years old" — or at minimum, the year dropdown should not allow years this recent.
Actual Result	It just goes to the next step. No error, no warning. A person born in 2024 (less than a year old) can complete registration without any issue.
Severity Justification	There's no age check at all. Anyone can register regardless of age, which is a basic validation that should be there on any platform dealing with student accounts. This could become a compliance issue.

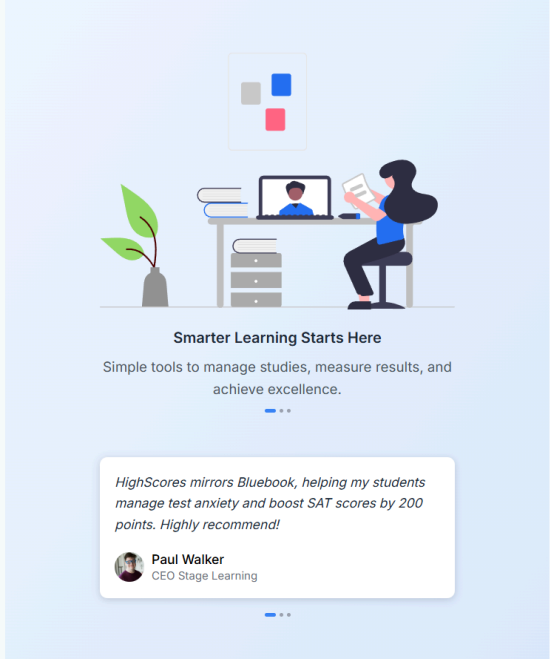
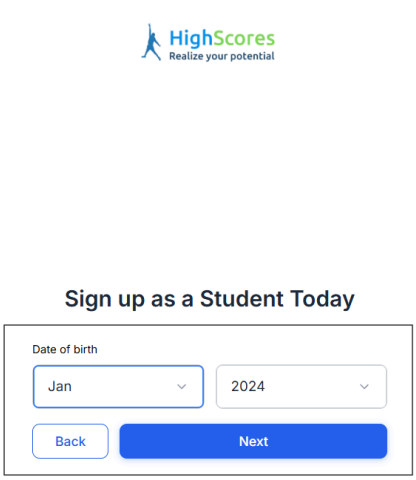
SCREENSHOT OF BUG-001



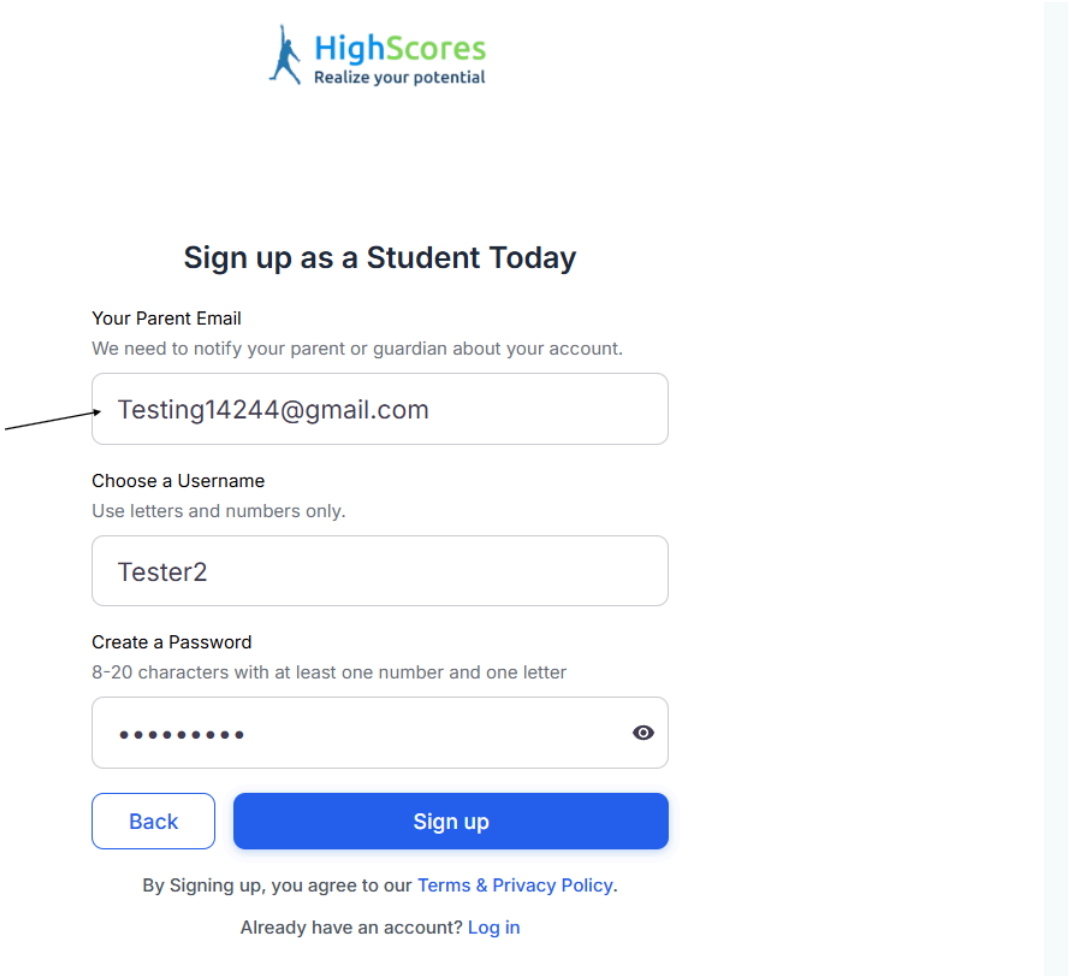


Bug Report — BUG-002

BUG-002 | Parent email is accepted without any verification — no OTP or confirmation sent	
Module	Student Registration
Bug Type	Functional
Severity	High
Priority	High
URL	https://next.practiz.xyz/register/student
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is on the final step of Student signup — the screen asking for Parent Email, Username, and Password.
Steps to Reproduce	1. Open https://next.practiz.xyz 2. Start the Student signup process 3. On the last step, enter any random made-up email in the Parent Email field (e.g. Testing14244@gmail.com) 4. Fill in Username, Password and Click Sign up
Expected Result	The system should send a verification email to the parent's address and ask for confirmation before completing registration. At minimum, it should validate that the email actually exists.

Actual Result	Registration completes successfully without any verification. No OTP, no confirmation email, no check at all. Anyone can type a completely fake email and still sign up.
Severity Justification	The whole point of collecting a parent email is to notify the guardian. If there's no verification, this field is meaningless — a student can just type anything and bypass parental notification entirely.
Screenshot	Attached below

SCREENSHOT OF BUG-002



Bug Report — BUG-003

BUG-003 | Password field has no requirement for special characters — weak passwords accepted	
Module	Student Registration
Bug Type	Functional
Severity	Medium
Priority	Medium
URL	https://next.practiz.xyz/register/student
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is on the final Student signup step with the Password field visible. The hint text says "8-20 characters with at least one number and one letter."
Steps to Reproduce	1. Open https://next.practiz.xyz 2. Go through the Student signup flow 3. On the password step, enter a simple password with only letters and numbers — e.g. “Tester123” 4. Click Sign up
Expected Result	The password policy should require at least one special character (like @, #, !) to ensure basic password strength. Most platforms enforce this as a security standard.
Actual Result	Password “Tester123” – letters and numbers only, no special character is accepted without any warning or error. The system must include special characters for more security.
Severity Justification	Weak passwords make user accounts easier to compromise. While the app does enforce minimum length, the absence of special character requirements lowers the overall security standard. It won't crash anything, but it's a real security gap.

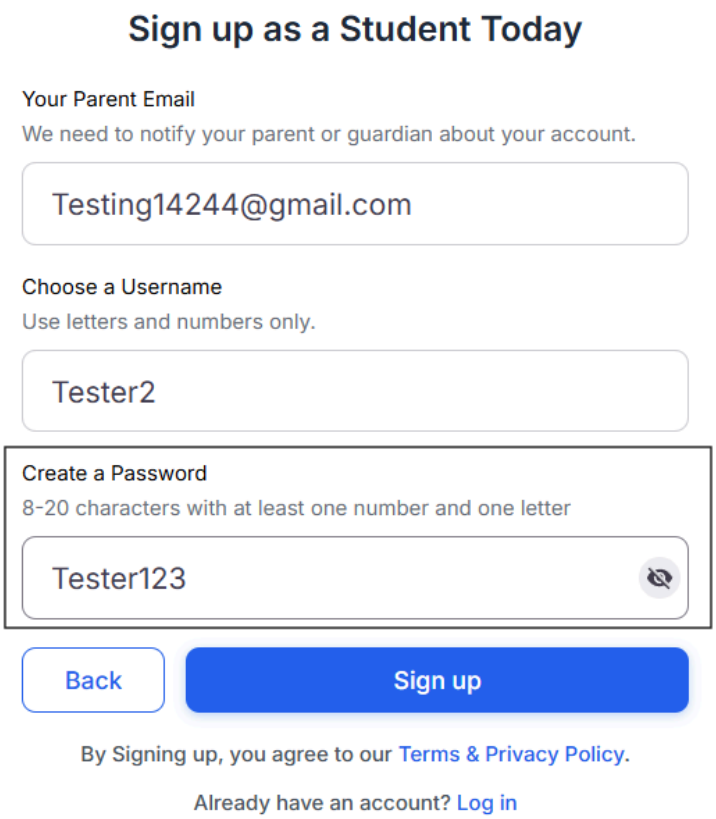
SCREENSHOT OF BUG-003

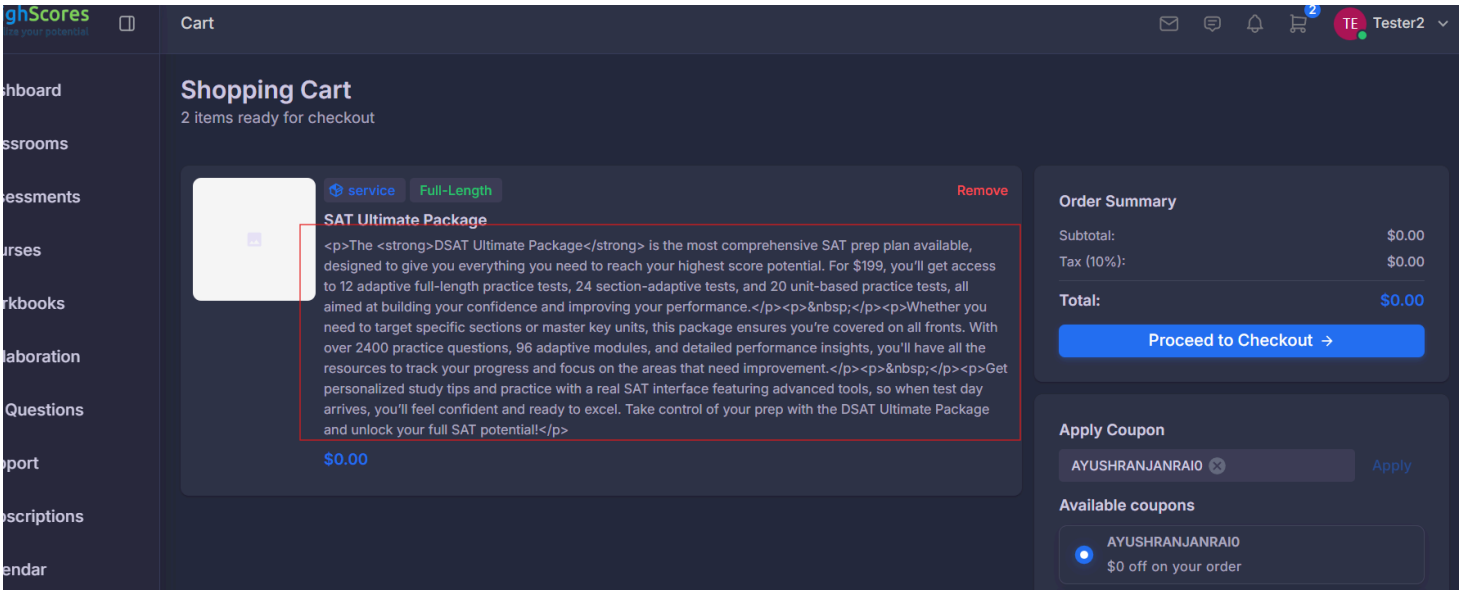


Bug Report — BUG-004

BUG-004 | HTML code is showing as plain text in the cart and description is not rendering properly	
Module	Shopping Cart
Bug Type	Functional
Severity	High
Priority	High
URL	https://next.practiz.xyz/cart?enroll=true&type=subscription
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The user is logged in and has at least one item added to the cart.
Steps to Reproduce	1. Log in as a Student 2. Add any subscription package to the cart

	3. Open the Cart page and look at the product description
Expected Result	The description should show as normal readable text — properly formatted, clean, no code visible.
Actual Result	The description is full of raw HTML — you can see things like <P>, etc.. just sitting there as plain text. It's clearly unformatted backend content leaking onto the page.
Severity Justification	This is the cart page — literally the last thing a user sees before paying. Showing broken HTML here makes the whole platform look unfinished and untrustworthy.
Screenshot	Attached below

SCREENSHOT OF BUG-004



Bug Report — BUG-005

BUG-005 | Premium paid package can be purchased for $0.00 — checkout completes without any payment	
Module	Checkout / Payment
Bug Type	Functional
Severity	Critical
Priority	High

URL	https://next.practiz.xyz/cart?enroll=true&type=subscription
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is logged in and has added a paid subscription package to the cart.
Steps to Reproduce	1. Log in as a Student 2. Add the SAT Ultimate Package (or any paid plan) to the cart 3. Go through checkout 4. Check the order confirmation screen
Expected Result	The system should actually charge the user for the package. The amount paid should match the real price of the product.
Actual Result	Order confirmation shows Amount Paid = $0.00 and Payment Status = Confirmed. The package got fully activated without collecting a single rupee or dollar. No payment was made at any point during the process.
Severity Justification	This is the most serious bug I found. Anyone can get premium paid content for free just by going through checkout. There's no payment gate actually working. This is a direct revenue loss for the business.

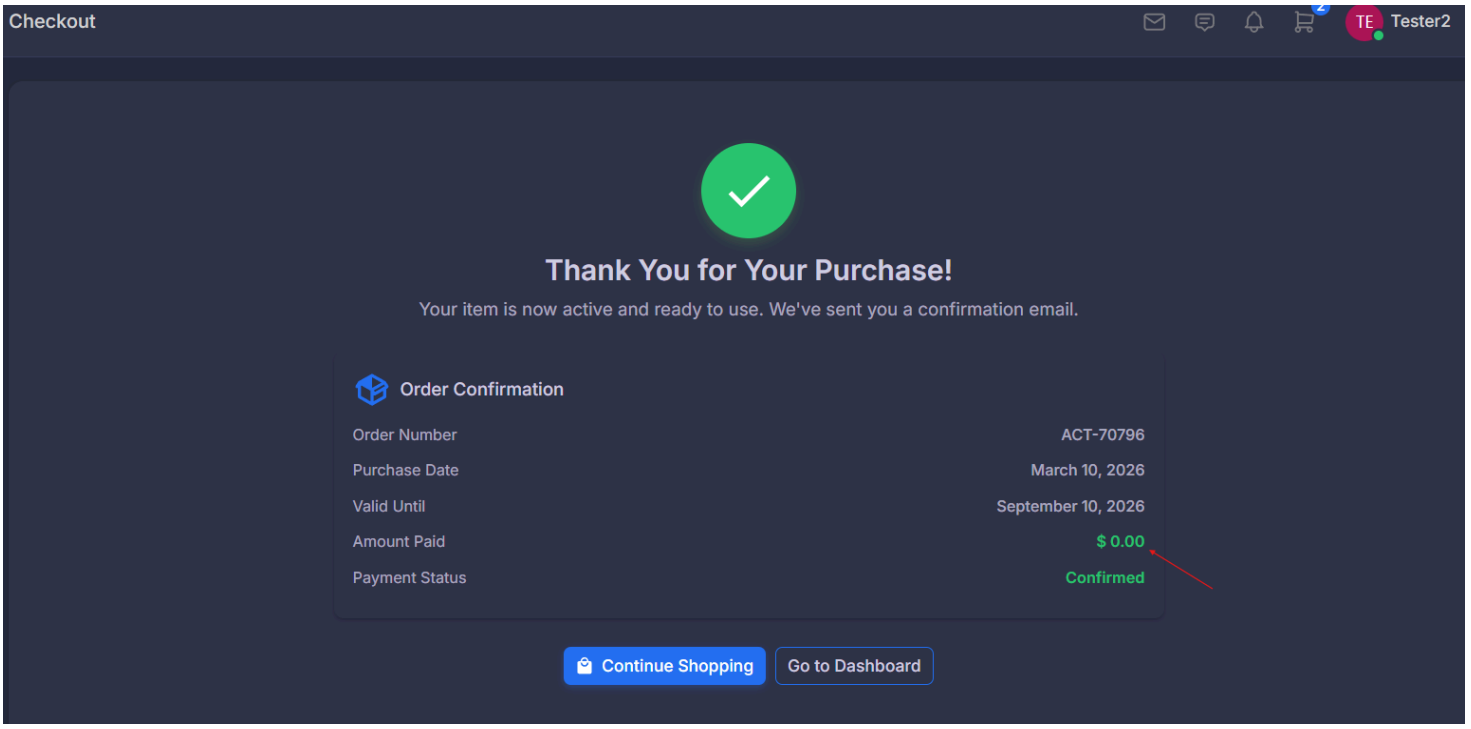
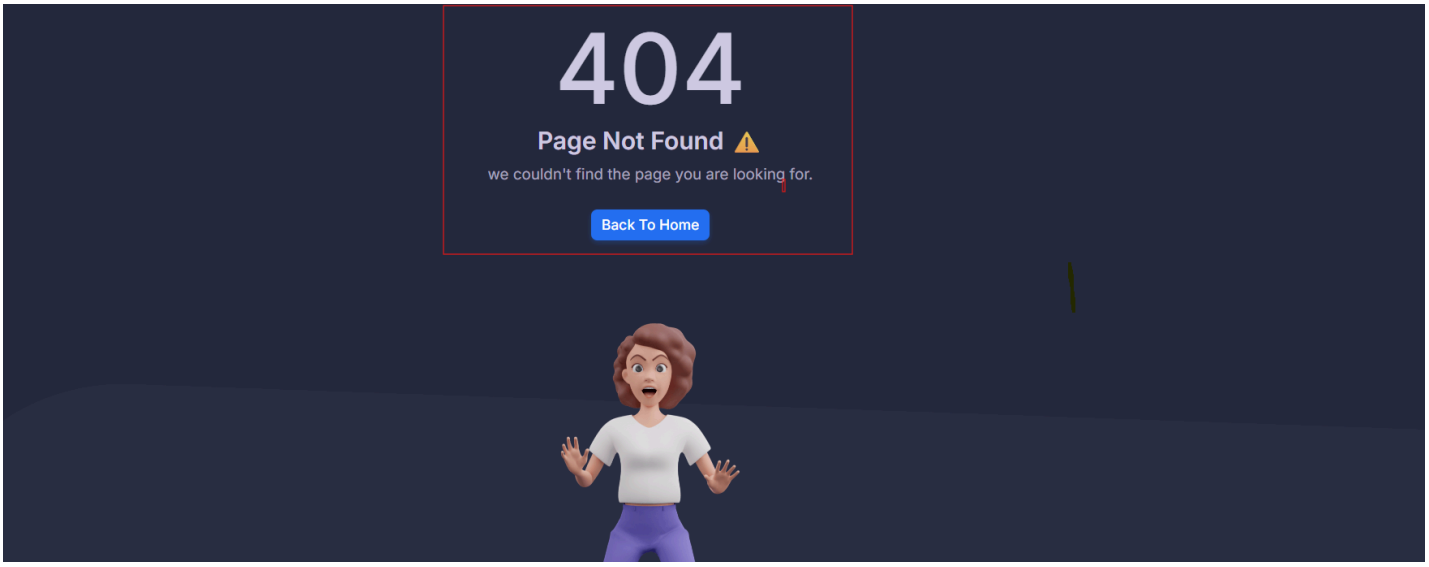
SCREENSHOT OF BUG-005



Bug Report — BUG-006

BUG-006 | "Continue Shopping" button on the order success page throws a 404 error	
Module	Post-Checkout / Navigation
Bug Type	Functional
Severity	Medium
Priority	Medium
URL	https://next.practiz.xyz
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User has just completed a purchase and is on the Thank You confirmation page.
Steps to Reproduce	1. Complete any purchase on the platform 2. You land on the "Thank You for Your Purchase" page 3. Click the "Continue Shopping" button
Expected Result	Should take the user back to the store, course catalog, or subscriptions page so they can keep browsing.
Actual Result	It sends the user straight to a 404 Page Not Found screen at https://next.practiz.xyz/not-found . The page just shows an error with no way forward except clicking "Back to Home."
Severity Justification	The purchase does go through successfully, but landing on a 404 right after is confusing — a user might think something went wrong with their order. It's a broken flow at a critical moment.
Screenshot	Attached below

SCREENSHOT OF BUG-006

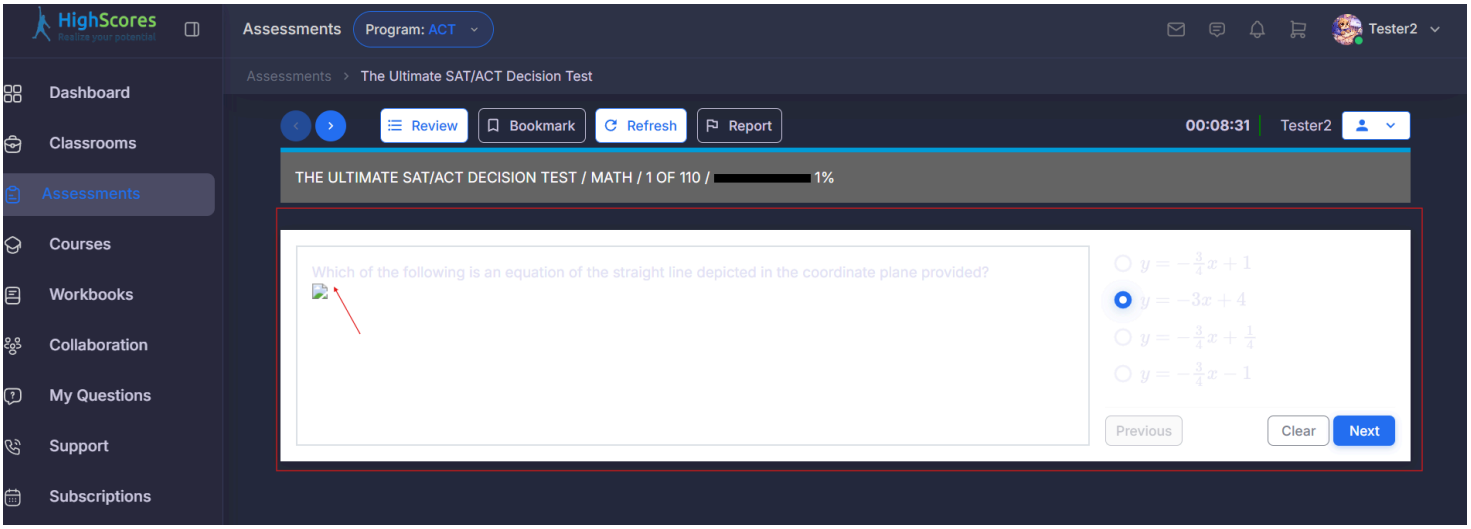


Bug Report — BUG-007

BUG-007 | Question text is almost invisible and the graph image is broken inside the assessment	
Module	Assessments / Test Taking
Bug Type	Functional / UI
Severity	High
Priority	High
URL	https://next.practiz.xyz/assessments/682f905e2af38d08c7da1927/attempt?attemptId=69aff2008d58b0e7b77e6a91
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The user is logged in and has started The Ultimate SAT/ACT Decision Test.
Steps to Reproduce	1. Log in as a Student 2. Go to Assessments from the sidebar 3. Open "The Ultimate SAT/ACT Decision Test" 4. Start the test and look at Question 1
Expected Result	The question text should be clearly readable with proper contrast. Any graph or image attached to the question should load and display correctly so the student can answer properly.
Actual Result	Two things are wrong here. First, the question text is there but almost completely invisible — it's rendering in a very light gray color against a white background, making it nearly impossible to read without straining. I could

	barely make out the text "Which of the following is an equation of the straight line depicted in the coordinate plane provided?" Second, the coordinate plane graph that the question is referring to is not loading at all — just a broken image icon is showing in its place. So the student is being asked to answer a question about a graph they can't see, written in text they can barely read.
Severity Justification	This is the main feature of the platform — students taking tests. If the question text is unreadable and the supporting image is broken, it's impossible to attempt the question correctly. This isn't a minor display issue, it directly breaks the test-taking experience.
Screenshot	Attached below

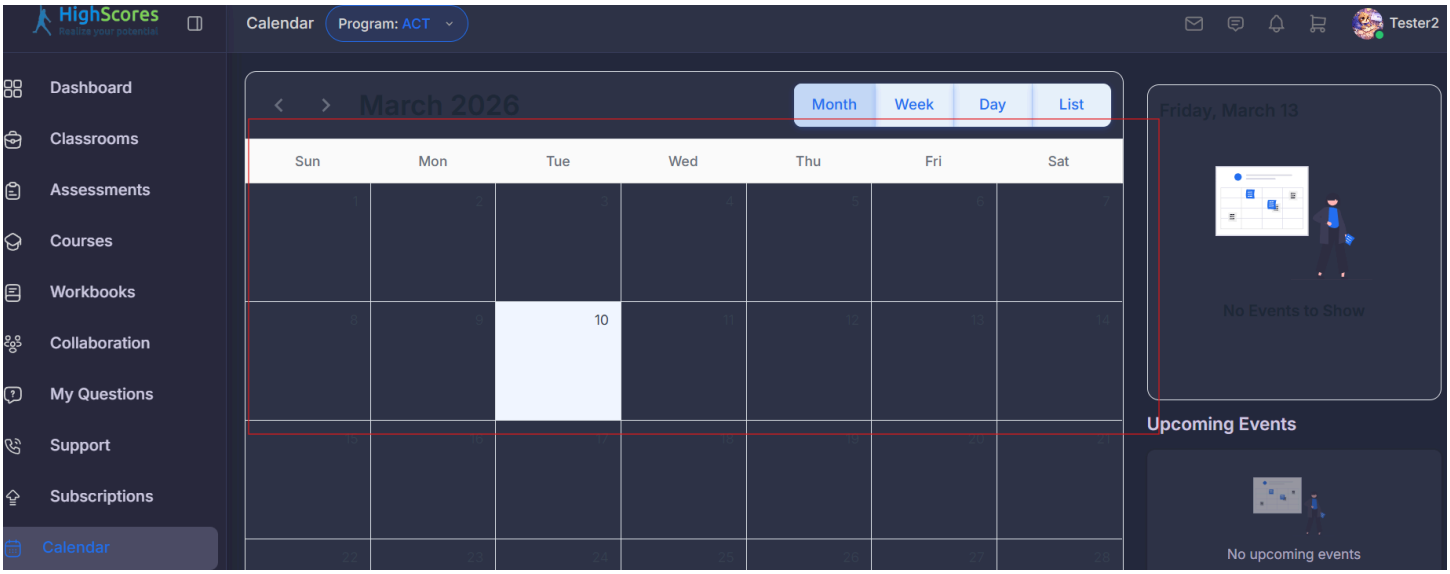
SCREENSHOT OF BUG-007



Bug Report — BUG-008

BUG-008	Calendar is really hard to use — dates are invisible in Month view and missing entirely in Week view	
Module	Calendar
Bug Type	UI / UX
Severity	Medium
Priority	Medium
URL	https://next.practiz.xyz/calendar
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is logged in as a Student and opens the Calendar from the sidebar.
Steps to Reproduce	1. Log in as a Student 2. Click Calendar from the left sidebar 3. Check the Month view 4. Then click the Week button on the top right and check that view too
Expected Result	Both views should be easy to read. Date numbers should be clearly visible in every cell. The Week view should show the day name plus the actual date — something like "Tue 10" — so the user knows which week they're on. Highlighting should only be on today's date, not random columns.
Actual Result	I tested both views and both have problems. In Month view, the date numbers are technically there but you really have to squint to find them. The text is a very similar shade to the dark blue background so everything just blends together. The only reason I could even tell today was the 10th is because that cell happens to have a white background. Every other date is practically invisible. When I switched to Week view it got more confusing. The column headers just say Sun, Mon, Tue, Wed — no actual date numbers anywhere. So I had no idea which week I was even looking at. And for some reason Tuesday had a completely white background while every other day was dark blue, which looked really inconsistent and broken. The time labels on the left had the exact same contrast issue as the Month view too.
Severity Justification	Nothing is crashing but the calendar is genuinely difficult to use. If you can't read the dates, you can't plan anything. Both views need work.
Screenshot	Attached below

SCREENSHOT OF BUG-008



Bug Report — BUG-009

BUG-009 | Collaboration chat is showing 0 participants even though multiple students are clearly chatting	
Module	Collaboration / Chat
Bug Type	Functional
Severity	Medium
Priority	Medium
URL	https://next.practiz.xyz/collaboration
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is logged in as a Student and opens the Collaboration section from the sidebar.
Steps to Reproduce	1. Log in as a Student 2. Click Collaboration from the left sidebar 3. Open the existing classroom conversation 4. Look at the text just below the conversation name
Expected Result	The participant count should show the real number of students who are part of that conversation.

Actual Result	I opened the conversation and could clearly see messages from multiple students — Shalini HM, Bandaru Srinivas, Anurag Choube, and others were all there actively chatting. But right below the conversation name it was showing "0 participants." That number is just completely wrong. There are clearly people in this chat, the counter just isn't picking them up at all.
Severity Justification	Messages are going through fine so the chat itself isn't broken. But showing 0 participants in an obviously active conversation means something in the data tracking isn't working right. It's misleading and makes the feature feel unreliable.

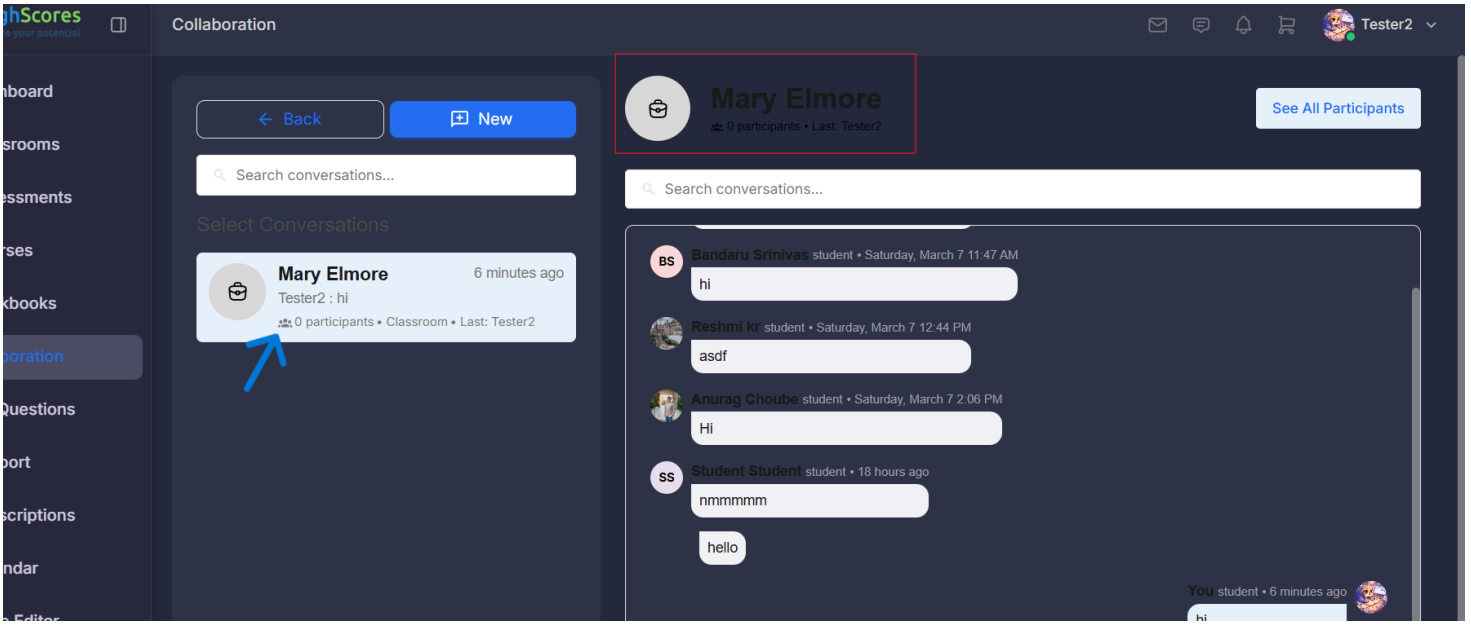
SCREENSHOT OF BUG-009



Bug Report — BUG-010

BUG-010	Multiple navigation links across the platform lead to a 404 — Code Editor, Resume, and Marketplace are all broken	
Module	Navigation / Sidebar / Profile Menu
Bug Type	Functional
Severity	High
Priority	High
URL	https://next.practiz.xyz
Browser	Chrome
Device / OS	Desktop | Windows 11
Preconditions	The User is logged in as a Student and can see both the left sidebar and the profile dropdown menu.
Steps to Reproduce	1. Log in as a Student 2. Click Code Editor from the left sidebar 3. Note the 404 error 4. Go back and click on the profile icon at the top right 5. Click Resume from the dropdown 6. Note the 404 error 7. Go back and click Marketplace from the same dropdown 8. Note the 404 error again
Expected Result	All three should open their respective feature pages — a code editor interface, a student resume builder, and a marketplace. These are listed as proper navigation items so they should all work.
Actual Result	All three throw the exact same 404 Page Not Found error. Code Editor is right there in the main sidebar that every student sees on every single page. Resume and Marketplace are in the profile dropdown which is equally visible. None of them lead anywhere — they all just land on the not-found page. It's not one broken link, it's a pattern. Three features are being advertised to users that simply don't exist yet or are pointing to the wrong URLs.
Severity Justification	These aren't hidden features buried somewhere deep in the app. They're in the main sidebar and the profile menu — places every user interacts with regularly. Finding three 404s across two different navigation areas makes the platform feel significantly unfinished.

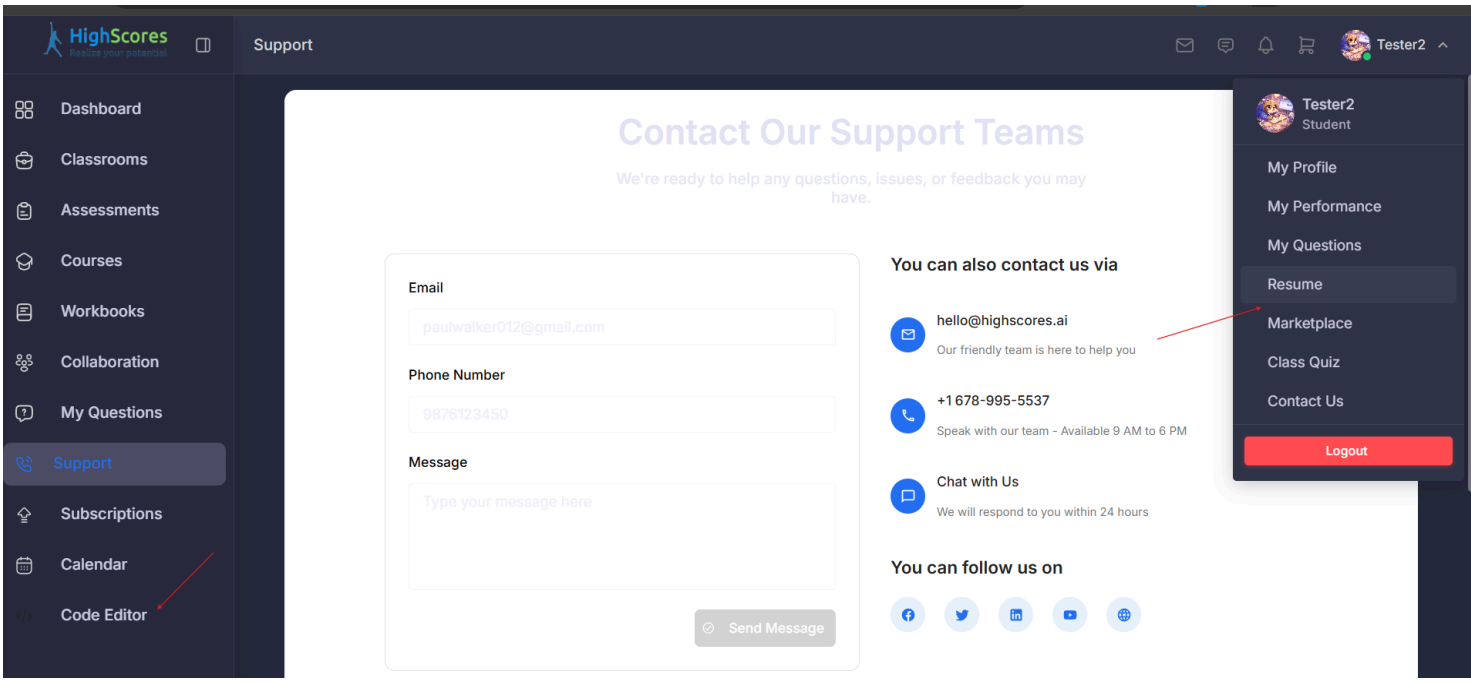
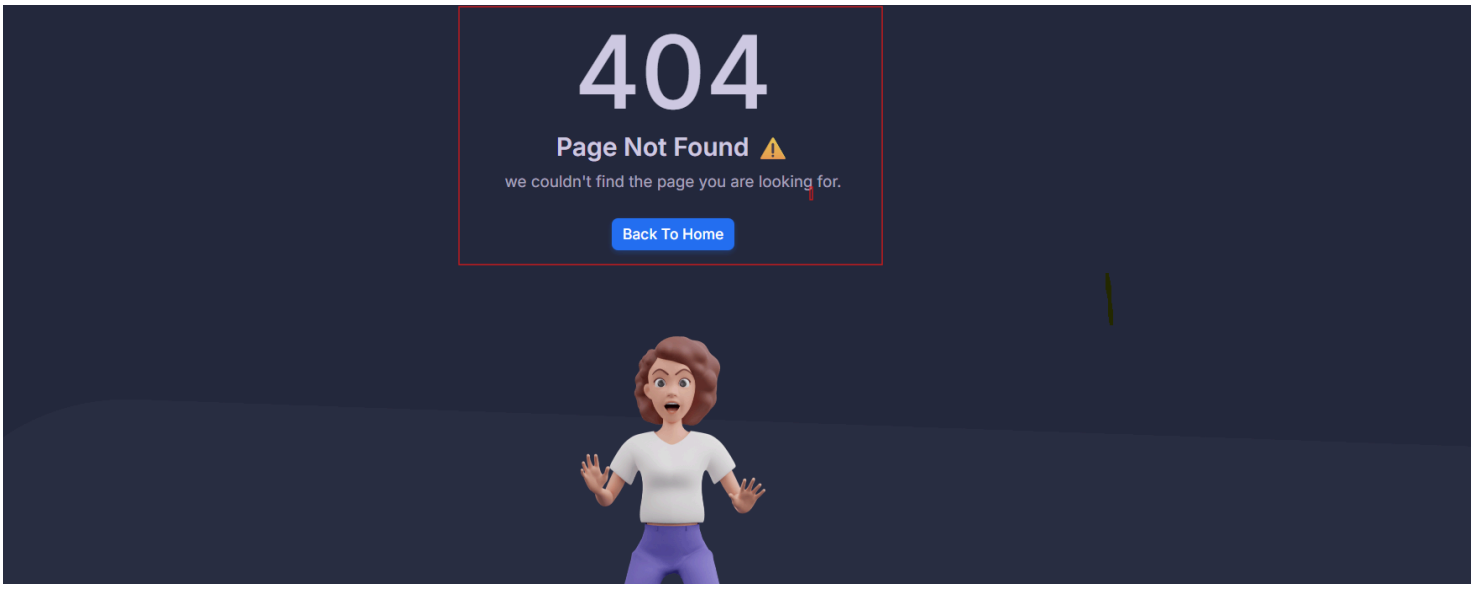
SCREENSHOT OF BUG-010





SECTION 4 — Test Environment Details

Parameter	Details
Website Under Test	https://next.practiz.xyz
Browser Used	Google Chrome
Operating System	Windows 11
Device Type	Desktop / Laptop
Screen Resolution	1920x1080
Network	Broadband (Stable)
Testing Type	Manual — Exploratory + Functional
Roles Tested	Student
Testing Date	10 March 2026
Tester Name	Ramakrishna Garala

Conclusion

I tested next.practiz.xyz as a Student by going through the registration flow, exploring the dashboard, attempting an assessment, making a purchase, and navigating through most sections of the platform.

The bugs I found range from security and payment issues to broken navigation links and readability problems. The most serious one in my opinion is the $0 checkout — a paid package completing without any actual payment being collected is something that could cause real damage to the business if left unfixed.

I made sure to verify every bug before reporting it and kept the steps simple enough that any developer can reproduce them quickly.

All 10 bugs have been documented with steps to reproduce, expected vs actual results, severity ratings, and screenshots attached.
