QA Intern Assignment - Second Brain Labs Platform

Submitted By: Ramakrishna Garala

Role Applied: QA Intern

Company: Second Brain Labs

Date: 07-03-2026

1. Introduction

This document presents the results of manual QA testing conducted on the Second Brain Labs platform. The testing was carried out as part of the QA Tester Internship assignment to evaluate platform functionality, usability, identify potential bugs and reliability.

2. Test Environment

Browser: Google Chrome

Device: Laptop (Windows)

Mobile Testing: Android Chrome

Platform URL: https://app.secondbrainlabs.com

3. Test Cases

Functional Test Cases

Test Case ID	Feature	Steps	Expected Result	Actual Result	Status	Severity
TC001	SignUp	1. Enter valid email and password 2.Click Sign Up	Account should be created successfully and user should proceed to next step	Account created and next page opened	Pass	Low
TC002	Email Field Validation	1. Leave email field empty 2. Enter password 3. Click Sign Up	System should display validation message for missing email	Error message should appear	Pass	Medium
TC003	Invalid Email Format	1. Enter invalid email format (ex: abc123) 2. Enter password	System should display error for invalid email format	Invalid email format "abc123" was accepted without any error message. The system proceeded to the next step without blocking the submission.	Fail	Medium
		3. Click Sign Up				
TC004	Password Visibility Toggle	1. Enter password 2. Click eye icon	Password should become visible and hide again when clicked	Password visibility toggles correctly	Pass	Low
TC005	Signup with Weak Password	1. Enter valid email 2. Enter very short password 3. Click Sign Up	System should reject weak password and show validation error	Short weak password was rejected and a validation error was displayed. The system prevented signup as expected.	Pass	Medium

TC006	Phone Number Validation	1. Enter letters or special characters in phone number field 2. Click Continue	System should accept only numeric phone numbers	Letters and special characters entered in the phone number field were accepted without any error. The form proceeded without blocking invalid input.	Fail	Medium
TC007	Empty Required Fields	1. Leave name and phone number empty 2. Click Continue	System should show validation errors and prevent submission	System should block submission	Pass	Medium
TC008	Google Sign-In	Click “Sign in with Google” button	Google authentication window should open	Google login popup should appear	Pass	Low
TC009	Login with Incorrect Password	1. Enter registered email with wrong password 2. Click Log In	System should display incorrect password error	Error message should appear	Pass	High
TC010	Forgot Password Link	Click “Forgot Your Password?” link	User should be redirected to password reset page	Password reset page should open	Pass	Low

4. Test Summary

Metric	Count
Total Test Cases Executed	10
Passed	8

Failed	2
Total Bugs Reported	9

The testing process identified several usability and validation issues.
Most of the defects are related to input validation and UI responsiveness. Fixing these issues will improve overall platform usability and stability.

5. Bug Reporting

Bug 1: Company Name field accepts numeric-only values

Steps to Reproduce:

1. Go to the onboarding page after signup
2. Enter numbers only in the Company Name field (example: 9080)
3. Click Save & Finish

Expected Result:

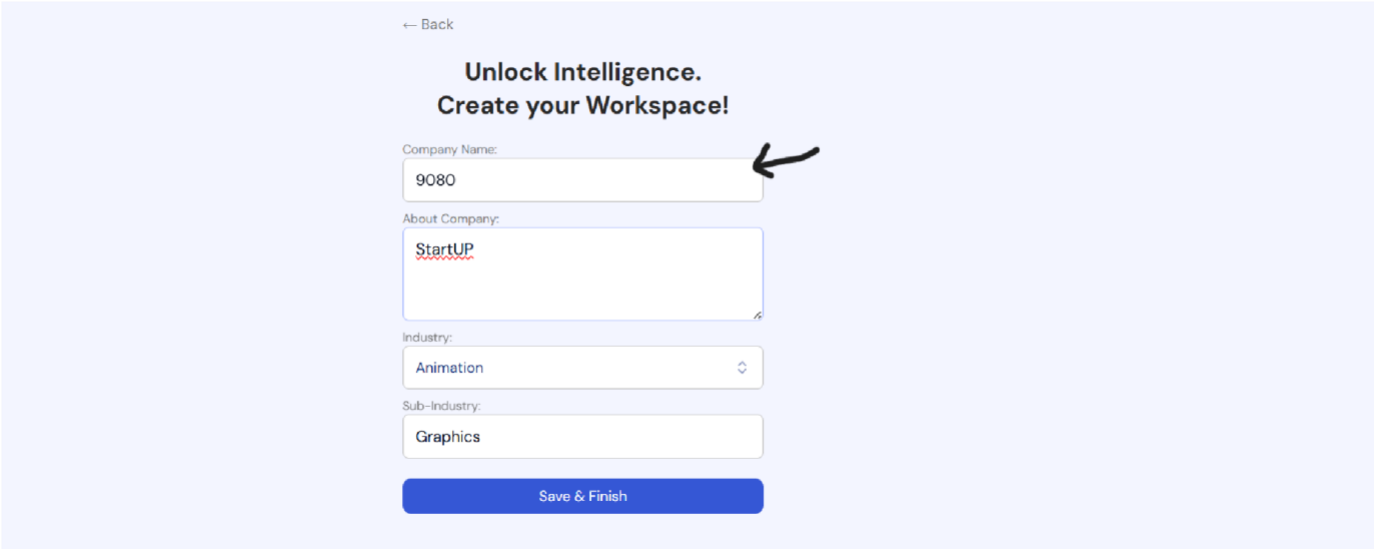
The system should require a valid company name containing alphabetic characters.

Actual Result:

The system accepts numeric-only values as a company name.

Severity: Medium

Type: Input validation issue
Screenshot:



Bug 2: Sub-industry field accepts random text without validation

Steps to Reproduce:

1. Open the onboarding form
2. Enter random text such as “Anime” in the Sub-industry field
3. Submit the form.

Expected Result:

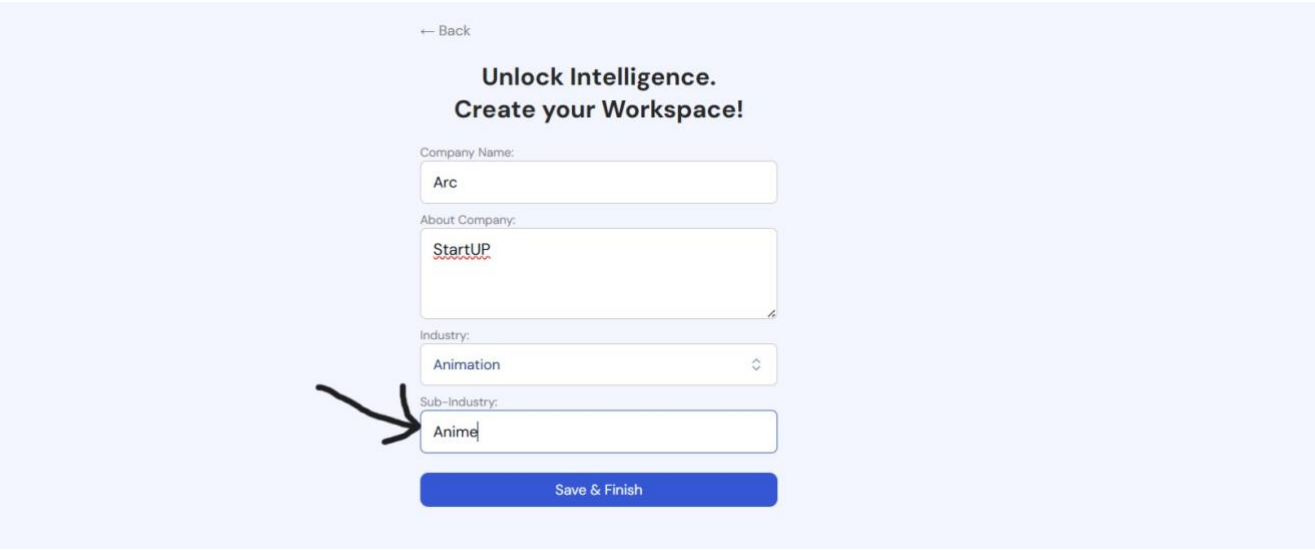
The field should validate the value or provide predefined options.

Actual Result:

Any random text is accepted.
Severity: Low

Type: Data validation issue

Screenshot:



Bug 3: No explanation provided that Facebook login is required for WhatsApp Business API connection

Steps to Reproduce:

1. Navigate to Settings
2. Click channels
3. Click Connect Channel for WhatsApp

Expected Result:

Before redirecting, the platform should display a clear message explaining that WhatsApp Business API requires Facebook authentication to complete the connection.

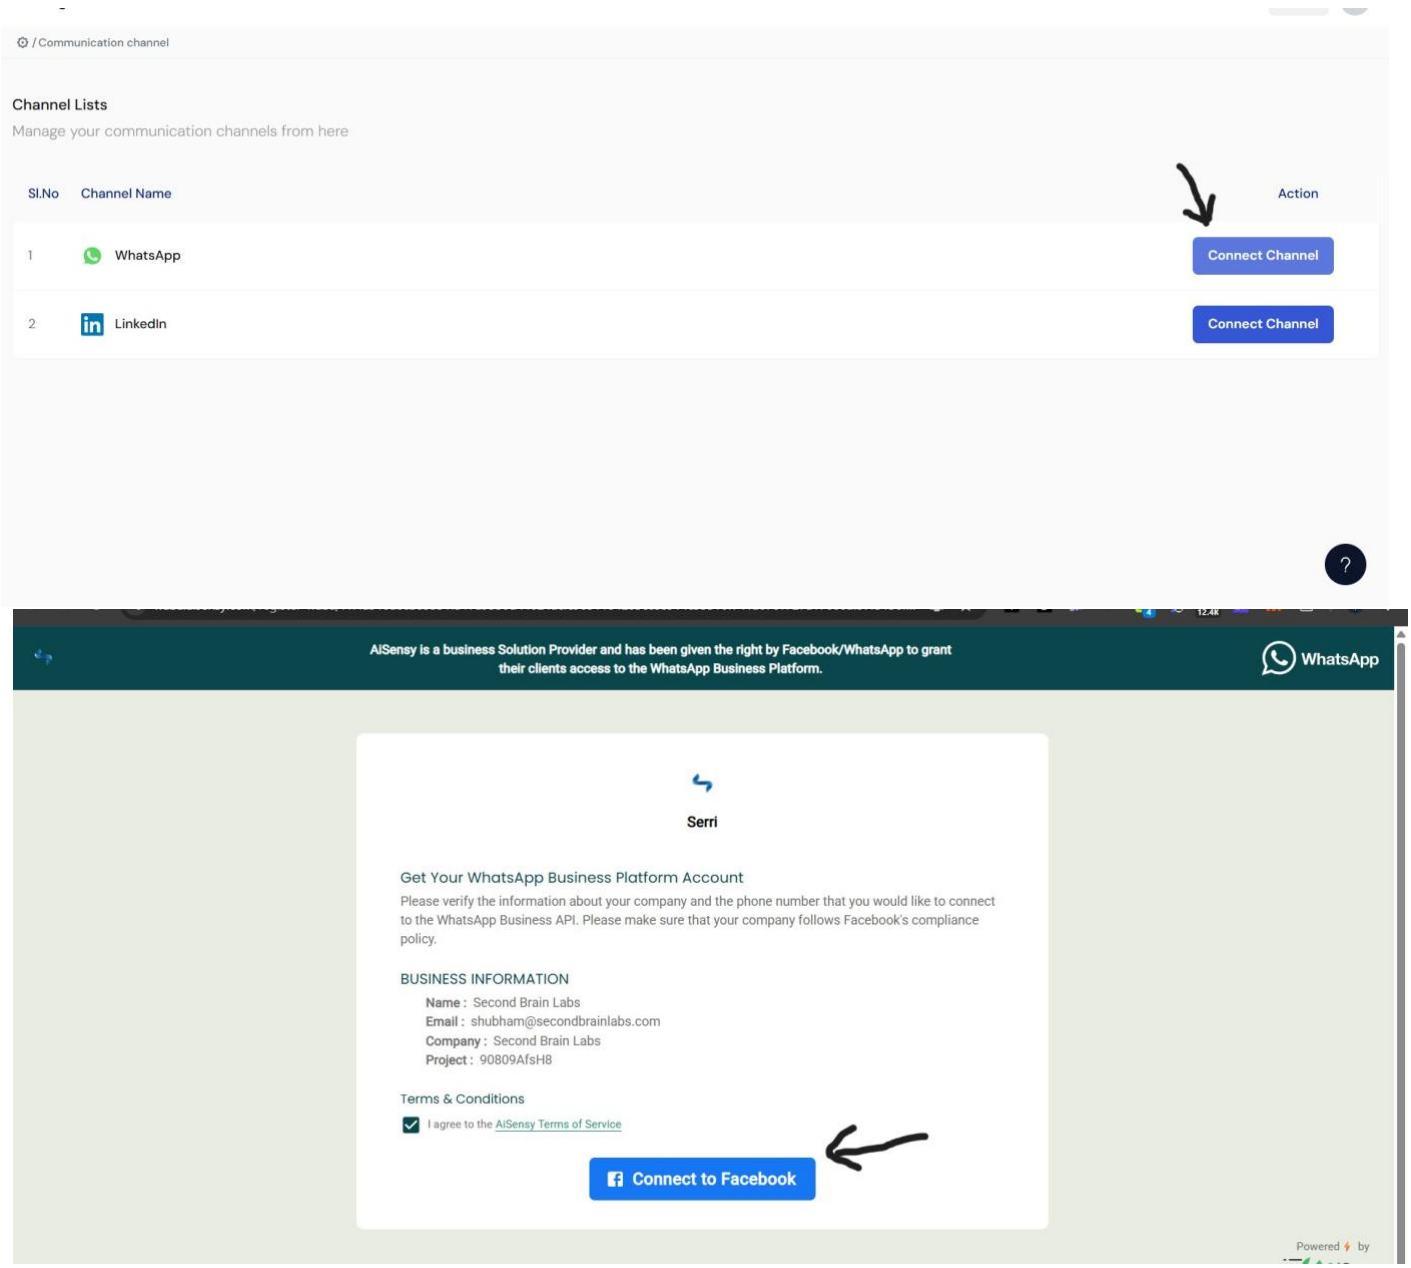
Actual Result:

The user is redirected directly to a Facebook login page without any prior explanation. This is technically correct behavior (Meta owns WhatsApp Business API) but the lack of context may confuse users who expect a standalone WhatsApp flow.

Severity: Low

Type: UX / Clarity issue

Screenshot:



Bug 4: Email verification warning is not visually prominent

Steps to Reproduce:

1. Login without verifying email
2. Observe the notification banner at the top

Expected Result:

The warning should be clearly visible and highlighted.

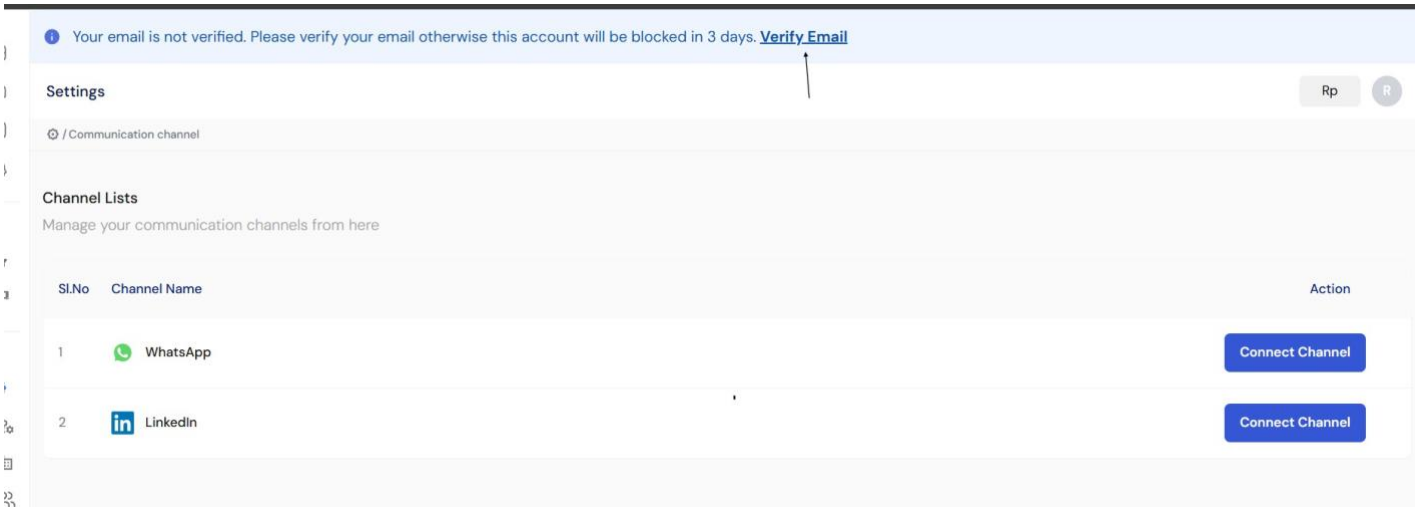
Actual Result:

The message appears in small light text and may easily be overlooked.

Severity: Medium

Type: UX issue

Screenshot:



Bug 5: Phone number field accepts invalid number format for selected country

Steps to Reproduce:

1. Go to the onboarding page
2. Select India **(+91)** as the country code
3. Enter an invalid phone number such as **166 444 4449**
4. Click Continue

Expected Result:

The system should validate the phone number format according to the selected country code. For India (+91), the number should start with a valid digit range and follow the correct format.

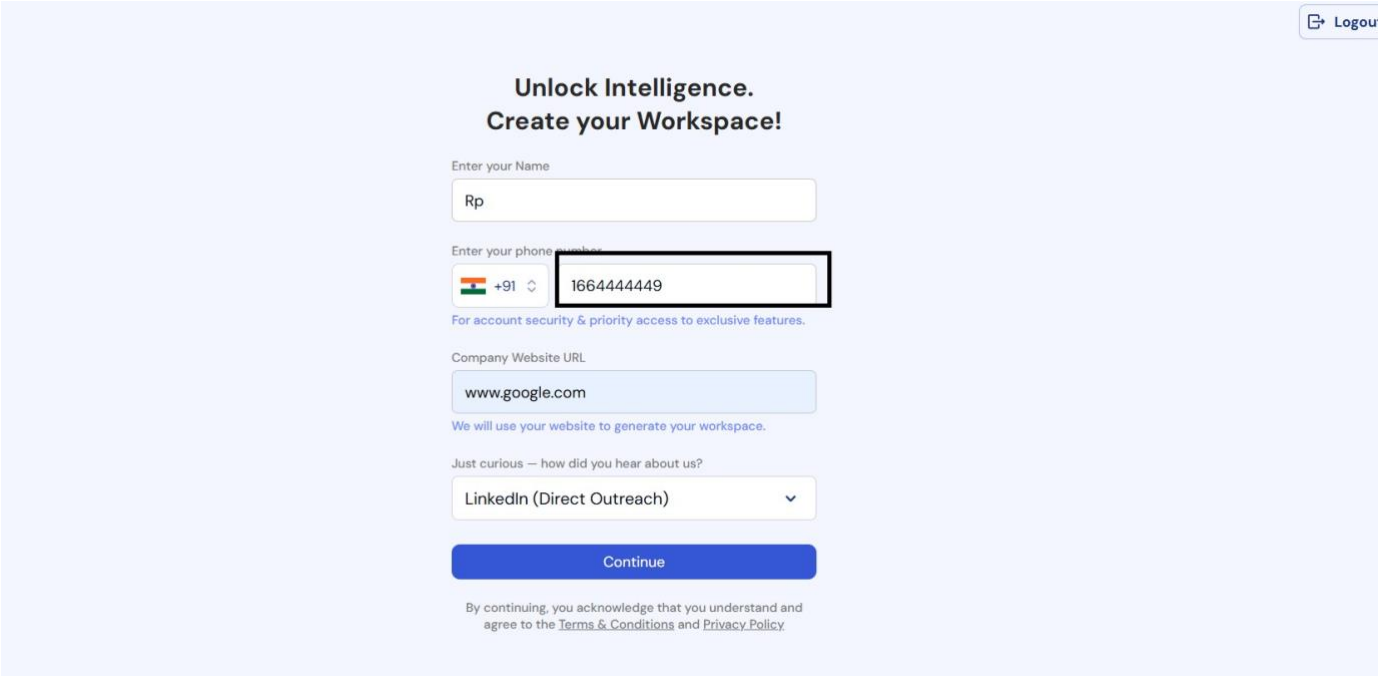
Actual Result:

The system accepts an invalid phone number format even when the country code is set to India.

Severity: Medium

Type: Input validation

Screenshot:



Bug 6: Search placeholder text is unclear in Contacts section

Steps to Reproduce:

1. Navigate to Contacts page
2. Look at the search input field

Expected Result:

Placeholder text should clearly explain what users can search.

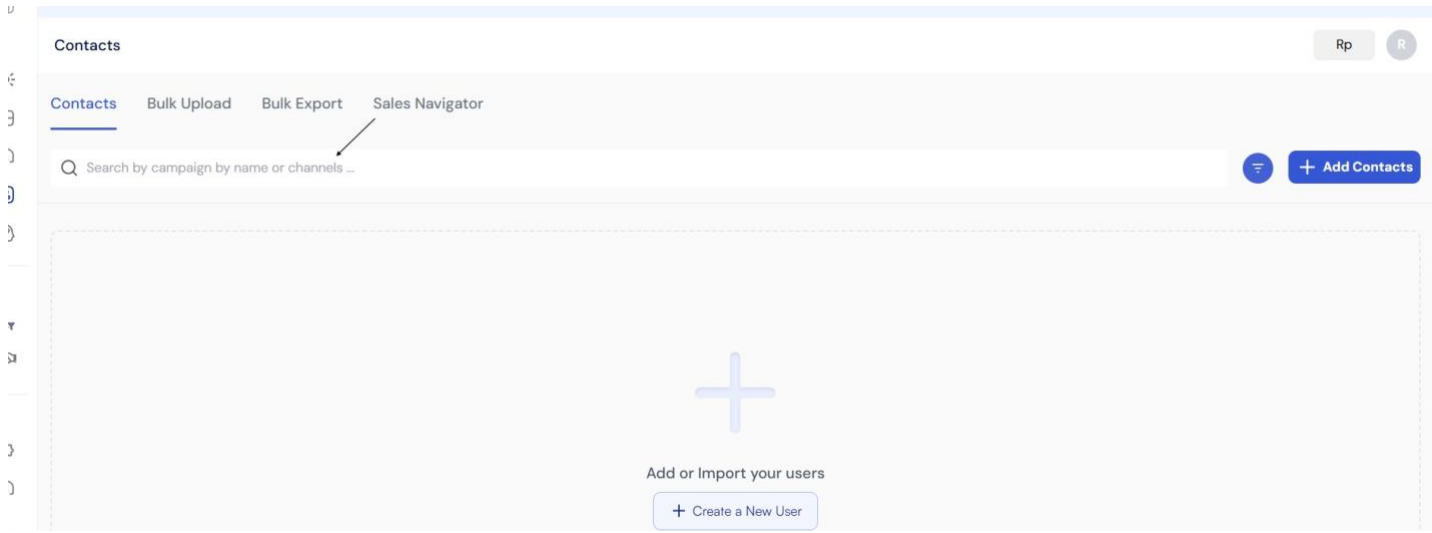
Actual Result:

The placeholder **"Search by campaign by name or channels…"** is confusing and grammatically incorrect.

Severity: Low

Type: UI issue

Screenshot:



Bug 7: Email verification warning does not restrict access to platform features

Steps to Reproduce:

1. Create a new account using a valid email address
2. Login to the platform without verifying the email
3. Navigate through different sections such as Campaigns, Contacts, and Analytics

Expected Result:

The system should either restrict access to certain features until the email is verified or strongly enforce verification before allowing full access.

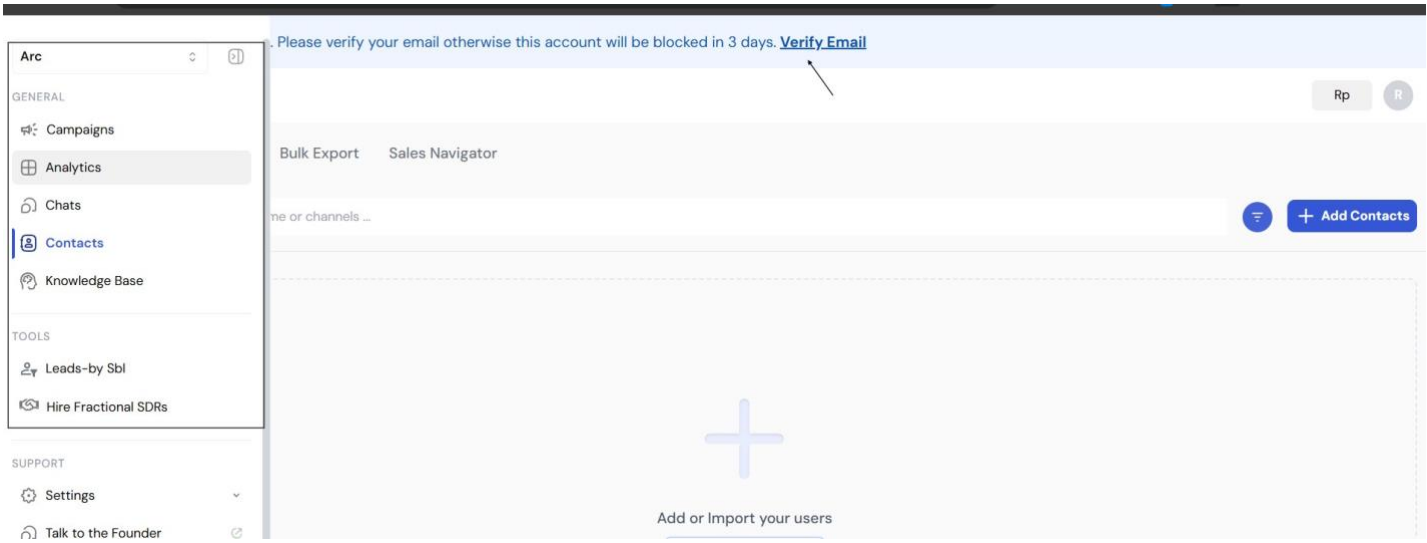
Actual Result:

The platform shows a warning message about email verification, but the user can still access most features of the system without completing verification.

Severity: Medium

Type: Functional / Workflow issue

Screenshot:



Bug 8: Dashboard provides no guidance when there is no data

Steps to Reproduce:

1. Login to the platform with a newly created account
2. Navigate to the Analytics or Dashboard section
3. Observe the displayed metrics

Expected Result:

The system should provide helpful onboarding guidance such as instructions or tips on how to create campaigns or add contacts to generate data.

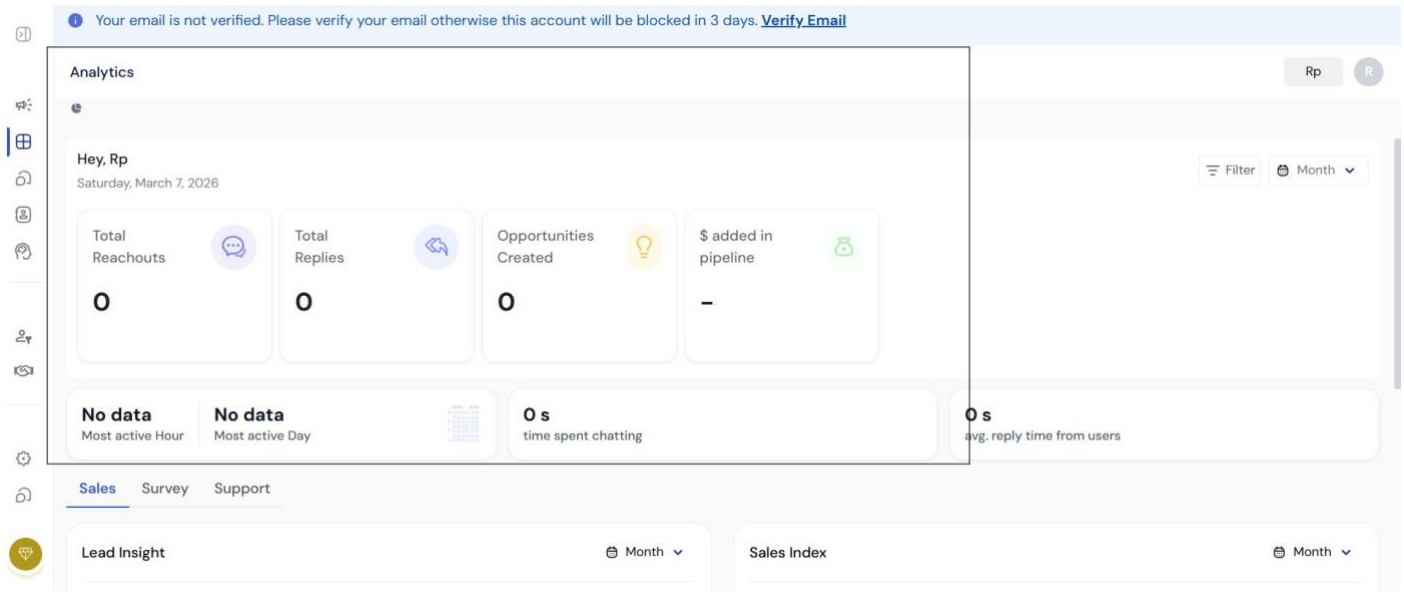
Actual Result:

The dashboard displays empty metrics with several "0" values and messages such as "No data", without clear guidance for the user.

Severity: Low

Type: UX / Usability issue

Screenshot:



Bug 9: Mobile layout appears partially optimized and some UI elements overlap

Steps to Reproduce:

1. Open the platform in a mobile browser

2. Navigate to pages such as Campaigns or Chats

3. Open popups such as filters or tutorial videos

Expected Result:

The interface should adjust properly to smaller screen sizes, ensuring all elements are aligned and accessible.

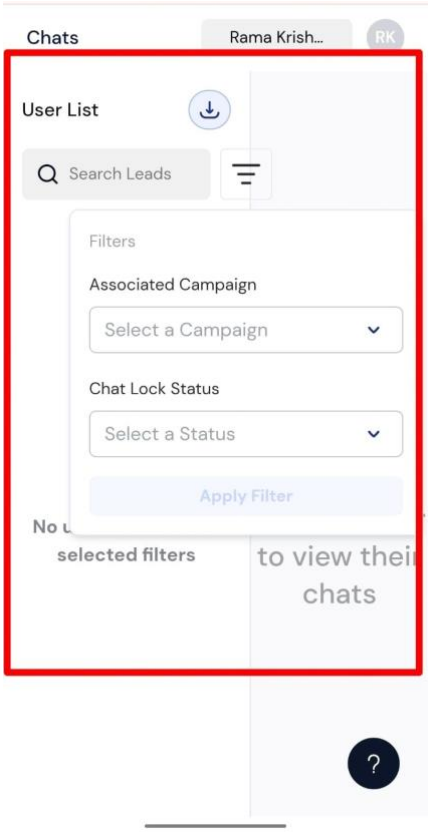
Actual Result:

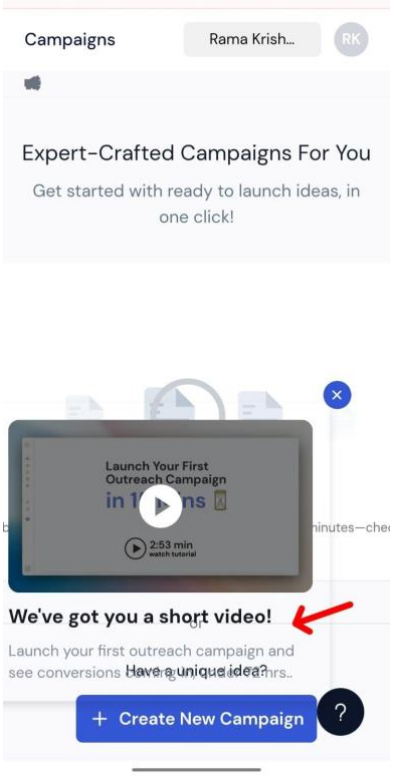
Some UI components appear compressed or overlapping, making navigation slightly difficult on mobile devices.

Severity: Medium

Type: Responsive UI issue

Screenshot:





Conclusion:

The platform was tested from the perspective of a new user focusing on onboarding, dashboard navigation, integrations, and mobile responsiveness.
During testing, 9 issues were identified related to input validation, UI responsiveness, workflow behavior, and usability. 10 functional test cases were executed with 8 passing and 2 failing.

While the platform structure is clear and easy to navigate, addressing these issues could improve the overall user experience, data accuracy, and system usability.
